Education

Kennesaw State University
Bachelor of Science in Software Engineering | Minor in Cybersecurity

May 2026
3.7 GPA

Technical Skills

Languages & Frameworks: Go (Golang), Rust, Python, TypeScript, React
Cloud & DevOps: Git, Docker, AWS, Harness

Professional Experience

WitnessAI - Software Engineer

August 2025 - Present

- Develop and maintain **Go and Rust proxy integrations** supporting the network layer of WitnessAI's enterprise GenAI security platform.
- Implement and maintain proxy-layer integrations that support secure communication between enterprise environments and generative AI applications.
- Built and maintain **Git-based CI/CD workflows using Harness** for versioning, building, and deploying engineering changes.
- Use **Docker** to manage containerized database and in-memory service dependencies for local development and testing.
- Collaborate directly with **enterprise customers** to troubleshoot integration behavior, understand technical requirements, and deliver production solutions.

WitnessAI - Software Engineering Intern

July 2025 - August 2025

- Developed **TypeScript and React integrations** for web-based applications used to detect and protect sensitive information submitted to generative AI services.
- Built application-specific browser integrations using **React props, DOM state, and web events** across supported platforms.
- Debugged DOM interactions and UI rendering behavior using **Chrome DevTools**, resolving browser-based integration and data extraction failures.
- Contributed **TypeScript** features to a Node.js-based traffic analysis platform and collaborated with engineers through Git-based code reviews.

Projects

TSMocker - Type-Safe Mock Data Generator CLI

May 2025 - Present

TypeScript, Node.js, ts-morph, Faker.js, Commander, Jest

- Created a CLI utility to generate **10,000+ mock data entries** from TypeScript interfaces, supporting complex types for API prototyping and test-data seeding.
- Leveraged the **TypeScript Compiler API** and ts-morph to parse schema files and synthesize type-accurate mock objects at scale.
- Delivered modular CLI components with **90%+ test coverage** and TypeDoc-generated documentation, improving maintainability and preparing for public GitHub and npm release.
- Designed an interactive command panel for selecting mock data types and export options including **CSV**, eliminating manual command entry.
